

## **New Function (Software Update)**

Dear Customer,

We have a new function in our software, the maintenance reminder.

The display panel will now output the following message after the operating hours have elapsed for the maintenance interval:

To pause the message, please press  once and the device is ready for operation.

Please note that the normal function of the sampler is not affected by the maintenance reminder!

The message will reappear the next time the device is switched on. After the device has been repaired or serviced, the operating hours are reset by us and the message does not appear again until maintenance is due.

You can read the maintenance hours on the unit by pressing and holding the menu button in standby mode until "Maint. H" appears. Here you can read the current status of the maintenance hours.

Best regards from Ratingen

Your GSA-Team

### **Maintenance according to device and operating hours**

Device	Maintenance hours (operating hours since the last maintenance)
SG350ex	150
SG5100ex / SG5200	250
SG10-2 / SG10-2A	300
SG12	500
PM4-2	250
VC25-2	250
